## Election Oddities No One Can Explain

Building on the lengthening list of oddities and abnormalities [exposed by The New American writer Luis Miguel](#) on Thursday, Matt Palumbo of the Bongino Report [added three more](#): bellwether states that typically vote for the president but didn't his year; bellwether counties that typically vote for the president, but didn't this year; and Republicans reducing the Democratic Party's majority in the House when a "blue wave" was predicted instead.

Reported Miguel:

One of the most glaring issues is the vast difference in Georgia of the number of individuals who voted for President Trump, but not for the state's U.S. Senate race, versus the number of voters who did the equivalent for Joe Biden.

For the president, it was 818, meaning that of the millions of voters who cast ballots for him, only a little over 800 did not also vote for the Senate race.

For Biden, however, the number was 95,801 — meaning nearly 96,000 people allegedly voted for the former vice president but did not bother choosing candidates in the Senate contest.

According to Palumbo, Ohio is one of two highly reliable "bellwether states" — states that nearly always accurately serve as a national barometer for the presidency. Said Palumbo: "The winner of Ohio has gone on to win the presidential election in every single race since 1904, with two exceptions." Likewise with Florida: "Only twice has a Democrat won the presidency without winning Florida, while no Republican since Calvin Coolidge has won the presidency without it."

The question he raised is this: How did those two bellwether states go for President Trump (Trump 53.4 to Biden's 45.3 in Ohio; Trump 51.2 to Biden's 47.9 in Florida) but Biden win the presidency?

The mystery deepens when Palumbo reported on bellwether counties with the same reliable barometric history. There are 18 counties that have gone for the president between 88 and 100 percent of time in

elections dating back to 1956. In 2012 and 2016 all of them picked the president.

This year 15 of those 18 bellwether counties went for Trump.

As Palumbo posits: “In other words, we’re to believe that Republicans did well everywhere except the presidency[?]”

Speaking of anomalies, Michael Flynn’s attorney Sidney Powell who is lending assistance to the Trump campaign during the voter fraud investigation, just reported, “We’ve identified over 450,000 ballots that miraculously only have a vote for Joe Biden on them and no other candidate.”

It’s no mystery. It’s a fraud:

There has been a massive and coordinated effort to steal this election from We The People of the United States of America to delegitimize and destroy votes for Donald Trump. To manufacture votes for Joe Biden.

They’ve done it in every way imaginable, from having dead people vote in record numbers, to absolutely fraudulently creating ballots that exist only for voting for Biden.
