When computer programers first worked on A.I., they studies how animals learned to leverage this for machine learning. One of the discoveries was that the brains of frogs enacted an 'algorithm' which disallowed them from seeing unmoving objects. Their instinct saw them focusing attention on moving flies. So, even if ten dead flies lay right in front of the frog, it wouldn't eat them. It wouldn't even notice them. How many humans operate from world-views that preclude seeing beyond them? How much reality passes unnoticed because of our 'mental furniture' and ingrained habits of thinking?

## Subscribe to the New American

Get exclusive digital access to the most informative, non-partisan truthful news source for patriotic Americans!

Discover a refreshing blend of time-honored values, principles and insightful perspectives within the pages of "The New American" magazine. Delve into a world where tradition is the foundation, and exploration knows no bounds.

From politics and finance to foreign affairs, environment, culture, and technology, we bring you an unparalleled array of topics that matter most.
