Child sex trafficker and Deep State operative Jeffrey Epstein was deeply interested in crypto currency, Bitcoin, and the evolving global financial architecture, explains technology expert Aaron Day in this explosive interview on Behind The Deep State with The New American magazine's Alex Newman.

Continuing with this series on Epstein, Newman and Day break down how Epstein was involved in multiple ways in the development of crypto systems since at least 2009. The eventual goal is total monetary control through Central Bank Digital Currency (CBDC) or a private sector-based equivalent that will allow total control. That system is almost here, warns Day.

One of the big developments Day focuses on is how Epstein and his associates worked to undermine Bitcoin's usefulness as currency or money. Instead, they sought to render it slow and bulky so it could be portrayed as an "investment" or even "digital gold." While Epstein and his people did profit from this, the agenda is much darker.

Epstein was involved in the crypto space through crypto leader Brock Pierce, Day explains. Indeed, Pierce was Epstein's crypto advisor even as Pierce became Epstein's "front" for involvement in the space. The implications are hard to overstate.
