Enormous changes to the federal government's vaccine "recommendations" and even its position on complications are a "giant step in the right direction" and may be just the start of a seismic shift, argued Children's Health Defense Senior Director of Science and Research Dr. Brian Hooker in an explosive interview on Behind The Deep State.

Speaking to The New American magazine Senior Editor Alex Newman, Dr. Hooker described the findings of his book *Vax-Unvax: Let The Science Speak*, co-written with Robert F. Kennedy Jr., the current secretary of the Department of Health and Human Services. In short, the two found that more vaccines meant more health problems.

Dr. Hooker, whose own son was injured severely by vaccines, described the changes as long overdue. And while there is still more progress that must be made, these new policies put the U.S. government closer to the position on vaccines of countries that have far better health outcomes for children.

Also exciting is that for the first time, the federal government is publicly investigating the link between vaccines and autism. Prior to this administration, federal authorities balked at even discussing the link. Dr. Hooker actually worked with a CDC whistleblower who showed that they have known all along about the link.
