Rescuing Humanity Means Ending UN “Death Machine”, Warns Doc Who Predicted COVID Crazy

Getting out of the United Nations is not enough. Americans must remove UN influence from every level of government and every area of life if humanity is going to survive and thrive, warned legendary physician and psychiatrist Dr. Rima Laibow in this episode of Behind The Deep State.

Speaking of “bio-digital convergence” and the manipulation of DNA, Dr. Laibow warned that evildoers are working on “horrrifying” plans for the world. The damage is coming from the UN and its programs, she said, blasting the organization’s “genocidal intentions” to reduce the number of people on the planet.

Laibow, who famously predicted that an engineered COVID-style pandemic would be used to push a deadly vaccine, said she was frustrated that people were not yet listening to the extent needed. However, she said she now feels an unprecedented level of hope as more and more people wake up to what’s going on.

The effort to get the United States out of the UN is a good first start. But its tentacles are involved far beyond just the federal government. Much more is needed to root out the evil plans and protect humanity.
