The United Nations climate models being used to create policy in the United States and around the world are not reliable at all and “fail basic testing” regarding what is going on in the atmosphere, warned Science & Environmental Policy Project President Ken Haapala in this interview with *The New American* magazine’s Alex Newman.

Speaking from the [Doctors for Disaster Preparedness](#) meeting in Las Vegas, Haapala — who has a background in economics and mathematical modeling — also lambasted the proposed “solutions” to the alleged “problem” of CO₂ emissions, including unreliable power systems such as solar and wind energy. Instead, these policies will grow and expand government. The notion that CO₂ is a pollutant is false, he added, saying that CO₂ is vital to life and that adding more does not do much to the climate, but does enhance life on the planet.
